New Stainless Steel Reel for a Painted Steel Price

This Hydro Tek manufactured base mount hose reel is constructed of rust-proof stainless steel for durability in the harshest of environments. The universal mounting foot is made of durable zinc plated steel to bolt it almost anywhere. A pop-pin latch braking system will keep the hose in place. This high pressure, hot water hose reel is built with a Super Swivel and a Zerk fitting for prolonged working life. Why pay for a painted reel when you can have a stainless steel reel for about the same cost? An optional hose guide bracket is available, use part# HHP29. Capacity is 250' of 3/8" high pressure hose up to 5000psi and rated for 400° hot water. (This new AR151 hose reel replaces the Hydro Tek AR196 hose reel. AR196 was \$369 and had capacity of 200')

Part# AR151, List Price \$299

Also available in 3500psi, 250°F, with standard fittings and swivel

Part# AR110, List price \$259

The AR196 base mount reel (pictured at left) is discontinued, use new AR151
